Most base oil plants look the same from the outside. At ExxonMobil, we focus on what you can’t see — the CATALYST.

Significantly improve yields. Provide longer on-stream time. Avoid shutdowns due to feed upsets. A better catalyst provides better performance. In fact, our MSDW™ catalyst has demonstrated this for nearly 20 years. Our MWI™ and MAXSAT™ catalysts also deliver benefit-rich performance.

Walk by your base oil plant or the site of your new one. Then, think about how to improve it … and contact ExxonMobil.
